

Sealed Air *Innovative Options*

Fill-Air *Extreme*™ Film Does Everything Better!

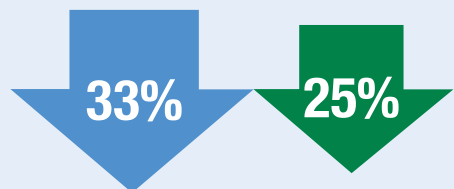

Introducing Fill-Air *Extreme*™ film from Sealed Air, the new and improved film for use on our Fill-Air® inflatable packaging systems.

Through extensive research and development, we have been able to improve Fill-Air® film in three key areas: strength, ease of use and a

decreased dependence on petroleum-based resins.

Fill-Air *Extreme*™ film is so superior to any other film that it will become the standard offering with all of our Fill-Air® systems, without additional cost per linear foot!

Unparalleled Improvements, Unparalleled Performance

Decrease in
Petroleum Resins†

Decrease in
Carbon Footprint‡

Sealed Air's Fill-Air® inflatable packaging is already known for its reliability and durability, yet Fill-Air *Extreme*™ film improves on the original by adding strength to both the material and the edge seal that locks air in.

Fill-Air *Extreme*™ film also improves the operator experience. The film runs

quietly and the perforations between the cushions release easier with less effort. Also, we have added up to 1,300 linear feet of film to each roll — up to a 45% increase — without increase in roll diameter or weight. This increased length keeps your operators packing longer with fewer changeovers.

Perhaps the greatest improvement Fill-Air *Extreme*™ film offers is an improved environmental profile. The film is constituted using 33% less petroleum-based resins.† Overall, Sealed Air has been able to reduce its environmental impact when producing this film by 25%.*‡

Why is Fill-Air *Extreme*™ a great packaging material?

- It does a great job protecting your product.
- You can recycle it – how2recycle.info
- You can deflate it to take up less space.
- 33% reduction in petroleum-based resins.†
- It's really light, saving on freight costs and energy consumed when compared to paper.
- It can be reused as void fill.

*Derived from internal Life Cycle Assessment.

‡When compared to Fill-Air® Select and Ultra films.
